Objective

Obtain a position that will utilize my skills with Windows/Linux based systems, networks, and languages including but not limited to PHP, SQL, and Bash. Problems requiring creative solutions, and upkeep of networks and systems are what I require. I have been administrating mixed platform networks and infrastructure for six years.

Current

Brewing wine and beer. Maintaining a small mixed Windows/Linux network with multiple users on multiple Unix (.com/ca) domains. Email(sendmail/Postfix), DNS, NNTP, Web (Apache) with multiple subdomains, and Windows (Samba/SMB) servers. Occasional contract work creating customised Linux based systems in both server and desktop capacities.

Skills Summary

- Linux (Slackware, Debian, RedHat, highly customized solutions)
- UNIX (AIX)
- Postfix/Sendmail/BIND Administration
- Advanced Apache administration
- LAMP (Linux, Apache, MySQL, PHP) solutions in corporate settings.

Experience

Como Creek Brewing

I've taken one year's hiatus from the IT industry to learn the skill of Brewing, something that has interested me for many years. In this time I have still been running hosting services for customers as well as running a news website at www.websterscafe.com and doing some consulting.

Consultation Services

Providing customized Linux based solutions to various computing problems in both desktop and server capacities on X86 and RISC based hardware. Every solution required a creative approach to a difficult problem that minimized cost and solved every customer need, including the flexibility to weather future complications (scalability). Administration of a small network for the purposes of testing software, hosting, and providing connectivity.

MCG Solutions

Depot technician

Repair of problems experienced by home computer users and telephone assistance to corporate users. Design and implementation of RedHat servers for the purposes of data backup and retrieval, user data storage. Scripting in BASH on Linux and AIX servers. Lots of experience with virus removal. Construction and administration of a "dirty" network for use in virus removal and backup, based on Slackware Linux systems. Study of threats such as the CWS family of browser hijackers/trojans.

Moody Computer Services

Depot technician

Virus detection and removal, hardware troubleshooting, implementation of Windows 2000 based business networks. Maintenance of Linux based systems running Postfix, Sendmail, BIND 8/9.x, Apache and MySQL with support for multiple domains and multiple users per domain. Custom computer builds for business and gaming purposes.

Websters Internet Services Inc

Internet cafe and hosting services. Owner, proprietor, and janitor. Experience gained in MySQL/PHP based network services, backup and restore systems. Full in house services maintained including web (Apache), DNS (BIND), mail (Sendmail), and database (MySQL). In house public computer restoration program developed and implemented using client/server architecture, written in BASH. In house point of sale system written and implemented using PHP and MySQL.

Thain

(www.thain.org)

Just for fun, Thain is a place to just hang out and play. There I'm known by my Internet handle, Handover Phist. The original incarnation was wholly developed and hosted in house at Websters Internet Cafe, and is available as an open source project. For info see <http://www.thain.org/about.html>

Additional

In addition to being something of a Linux geek, I play bass guitar and enjoy restoring a vintage motorcycle in my spare time. Riding it is a heck of a lot of fun too.
